

Build & Buy: Custom PC Builder and Online Store for Components

1.0. INTRODUCTION

1.1 Purpose

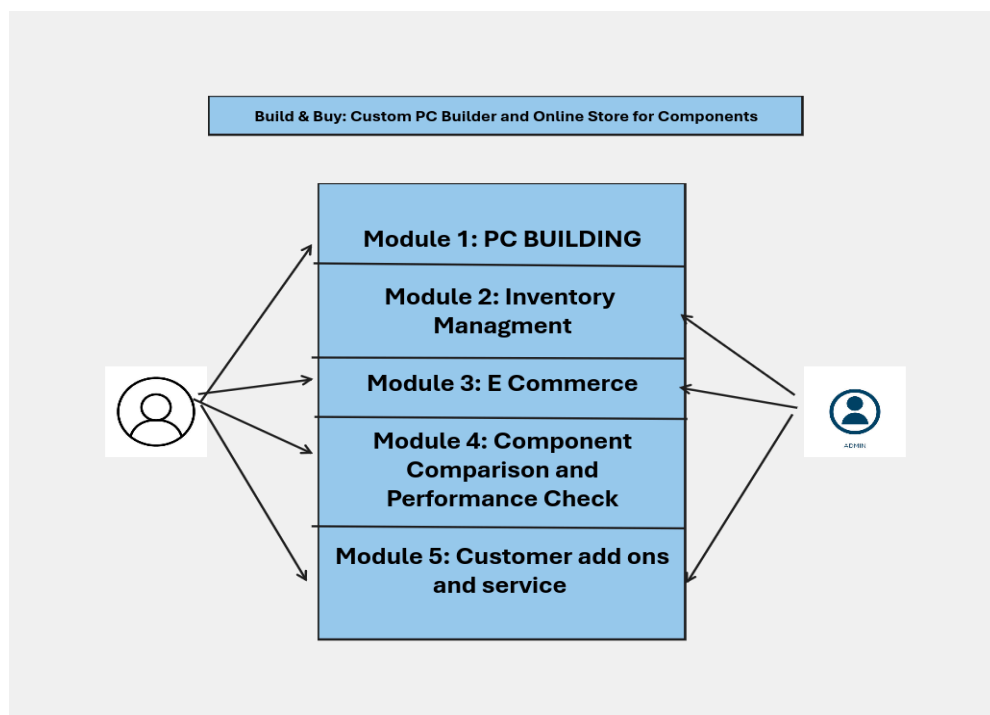

The Build & Buy platform aims to offer users an easy way to build custom PCs by selecting compatible components, purchasing them, and tracking their orders. It also provides tools for users to compare products, check performance, and ensure everything works together smoothly. The platform aims to provide a complete solution for anyone looking to build or buy PC components online.

1.2 Project Proposal

The Build & Buy platform will include several key modules: a PC Builder for customizing PCs with compatible parts, an Inventory Management system for updating and tracking components, and an E-commerce section for ordering and securing payments. Additional features include component comparison, performance checks, and customer services like reviews, polls, and coupon generation. This project will create a seamless experience for users to build, buy, and manage their PC components.

2.0. OVERALL DESCRIPTION

2.1 System Environment

2.2 Functional and Nonfunctional Requirements

2.2.1 MODULE 1: PC BUILDER

This module allows users to customize and assemble their PC by selecting various parts.

1. Component Selection
2. Quantity and Pricing
3. Printing and Screenshot
4. Compatibility Check (For Intel CPU all the Intel-compatible products will be shown)

2.2.2 MODULE 2: Inventory Management

Manages all PC components available in the warehouse and updates them.

1. Adding new components
2. Updating components
3. Stock summary (Giving a summary of the current products)
4. Category management for different types of products.

2.2.3 MODULE 3: E commerce

Purchasing different types of pc components

1. Ordering components
2. Shopping cart
3. Order Tracking
4. Secure payment/ order history

2.2.4 MODULE 4: Customer Add-Ons and Service

Providing a customer community

1. Customer can post their experience as a review
2. Participate in polls
3. Request for a component / Filing a complaint / Request for a component
4. Coupon Generation

2.2.5 MODULE 5: Component Comparison and Performance Check

Customer can choose the best product for him/er

1. Customer Can Compare and select the same product between different companies, prices, features
2. Using a bottleneck calculator, Customers can check if their PC has a bottleneck.
3. Customers can see their selected product's total watt consumption
4. Benchmark Comparison / Recommended Upgrade

2.3 Class Diagram

Fig 3.1.3 Component Database Table

3.1.1 Implementation of MODULE 1 (PC BUILDER)

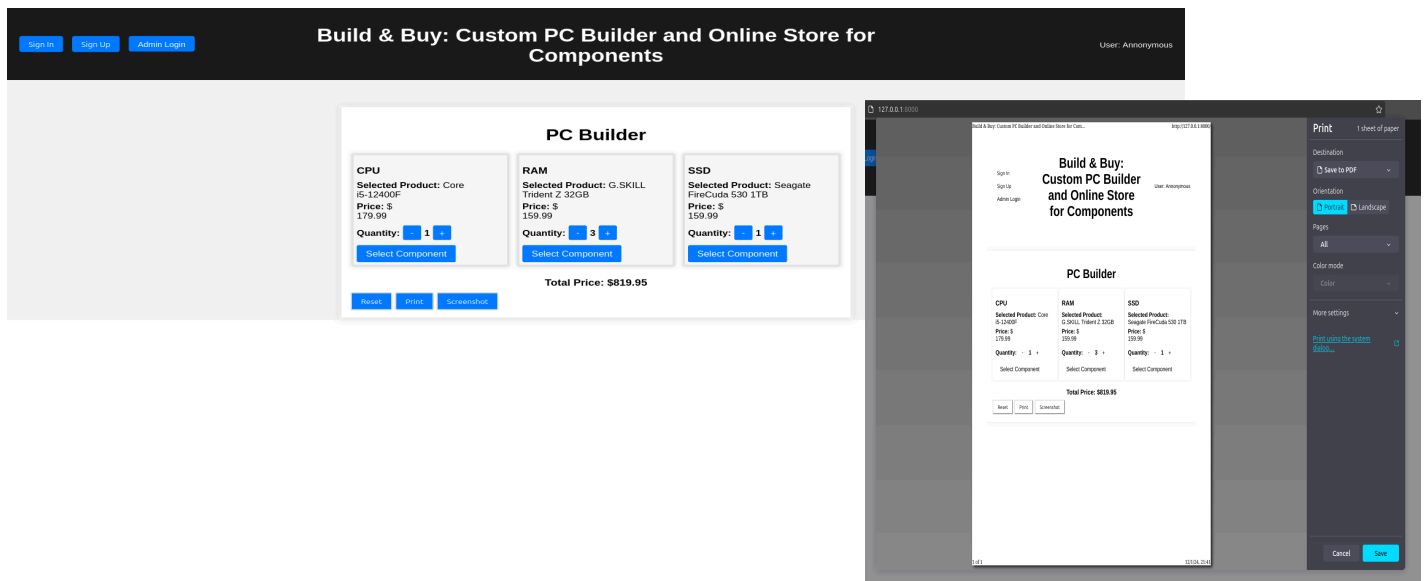

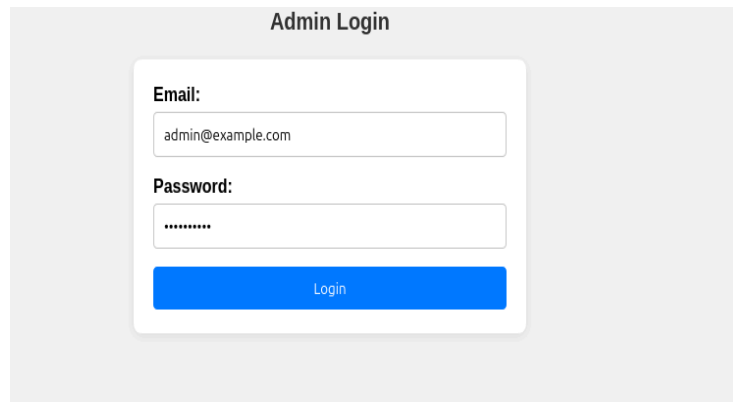

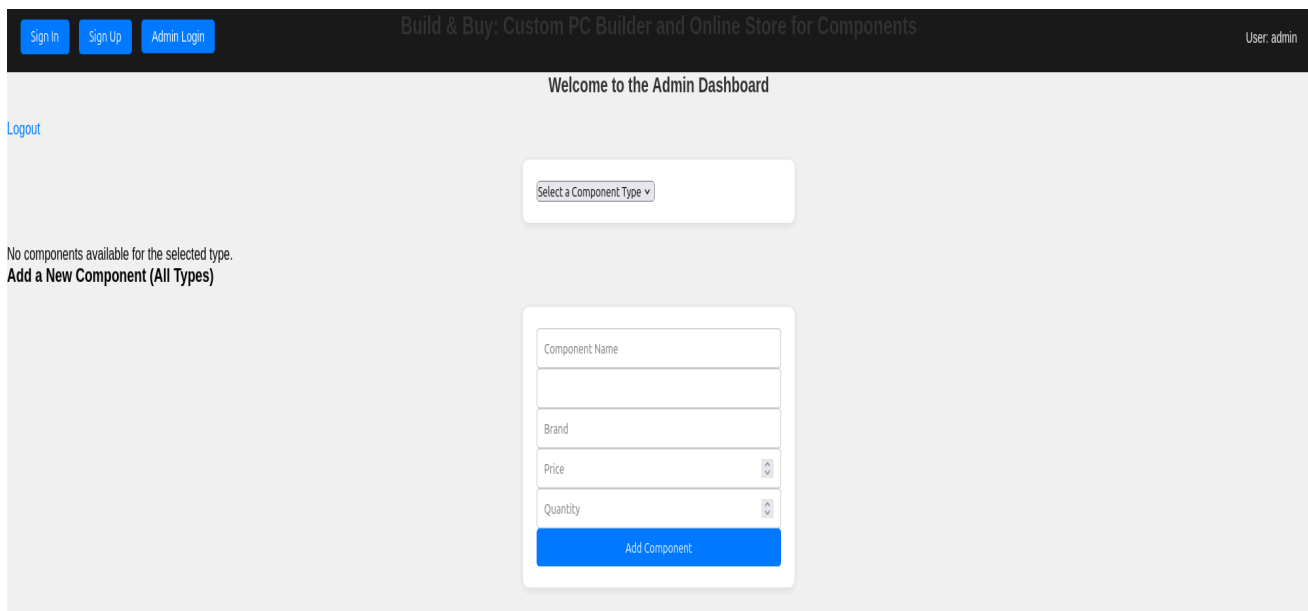

Fig 3.1.4 Taking screenshots and printed copies Selected components with different quantities and total price

3.1.1 Implementation of MODULE 2 (Inventory Management)

The image shows a login form titled "Admin Login". It is centered on a light gray background. The form itself is a white rounded rectangle with a subtle shadow. It contains two input fields: "Email:" with the text "admin@example.com" and "Password:" with masked characters "*****". Below these fields is a blue button labeled "Login".

Fig 3.1.5 Login to the admin panel for Inventory management

The image shows the "Admin Dashboard" for inventory management. At the top is a dark header bar with "Sign In", "Sign Up", and "Admin Login" buttons on the left, the site title "Build & Buy: Custom PC Builder and Online Store for Components" in the center, and "User: admin" on the right. Below the header, the main content area has a "Logout" link on the left and a "Welcome to the Admin Dashboard" message in the center. A dropdown menu "Select a Component Type" is positioned above a message that says "No components available for the selected type. Add a New Component (All Types)". Below this message is a form to "Add Component" with fields for "Component Name", "Brand", "Price", and "Quantity", each with a small up/down arrow icon, and a blue "Add Component" button at the bottom.

Fig 3.1.6 Admin Dashboard for inventory management with category-wise inventory management

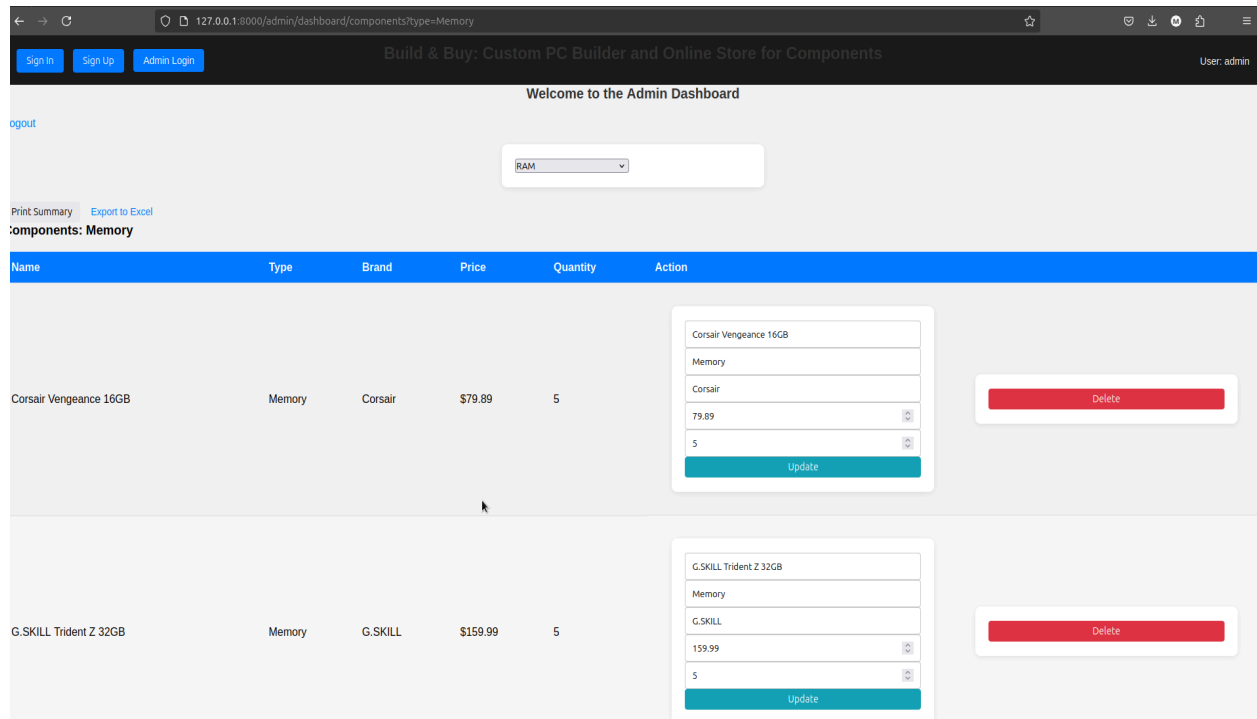

Fig 3.1.7 Admin can update(any column), and delete particular rows with the selected type of component for better category-wise inventory management

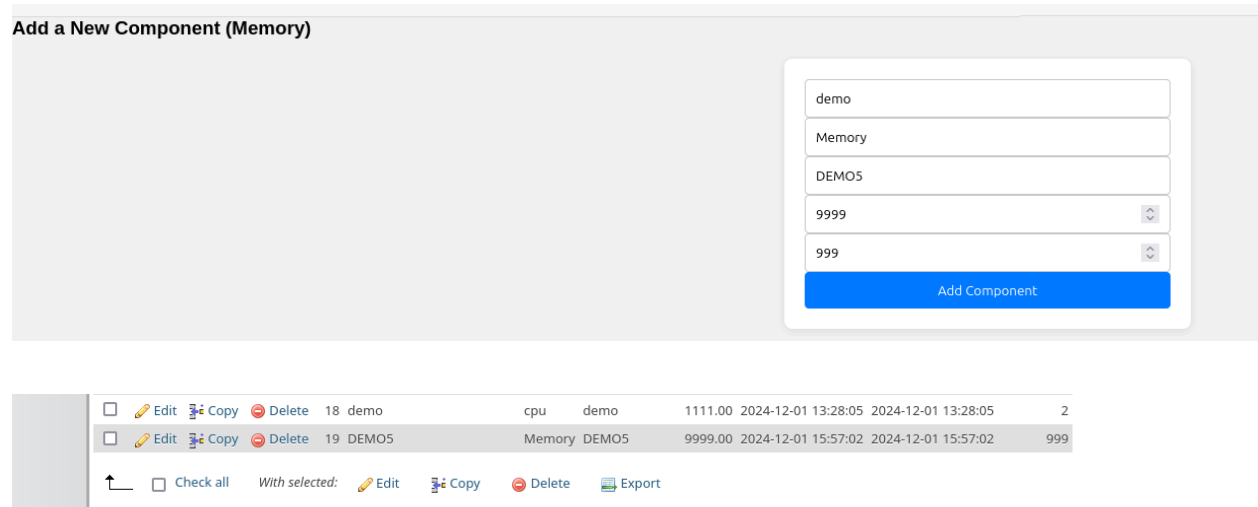

Fig 3.1.8 Admin can add a particular row with the selected type of component for better category management

3.2 Sprint 3

Implementation of MODULE 3 (E-commerce)

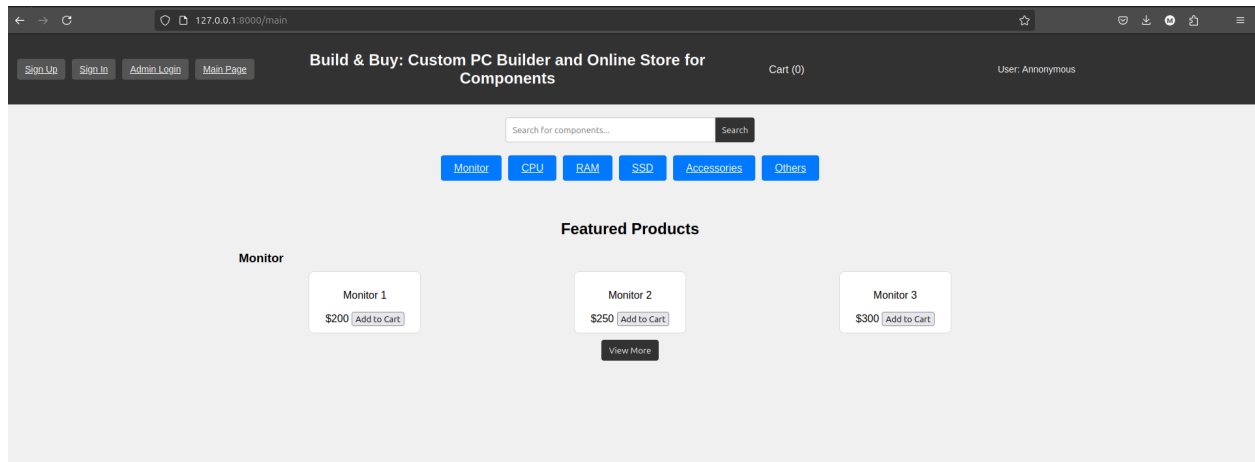

Fig 3.2.1 Customer Frontend for ordering different components like featured products(more will be added)

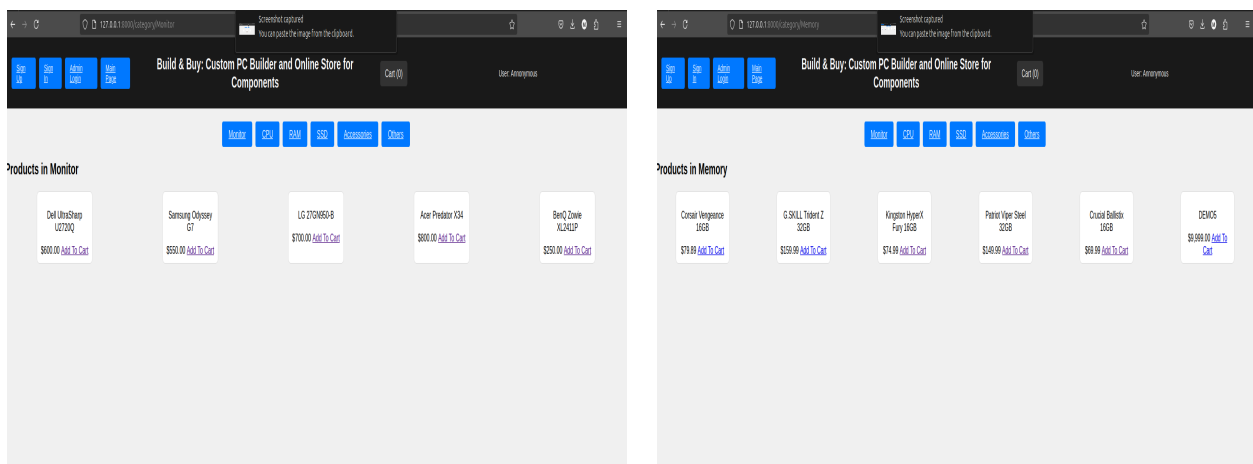

Fig 3.2.2 Customer can also choose from type wise components and add to cart

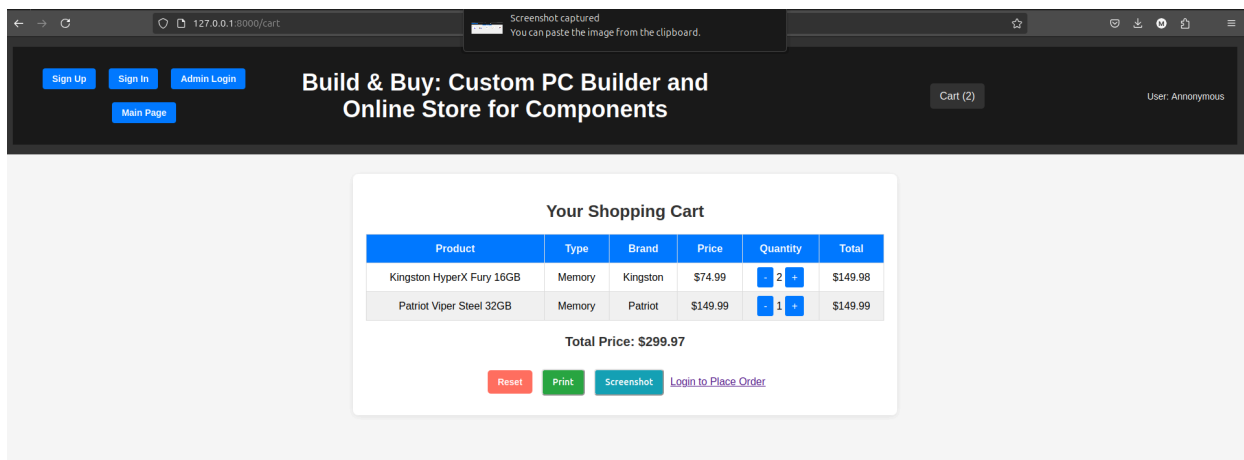

Fig 3.2.3 Customer cart, customer order and make payment(Dummy Payment Portal) after login

Fig 3.2.6 Customers dynamic dashboard for seeing orders, orders status, make payment

3.3 Sprint 4

Implementation of MODULE 4 (Customer Add-Ons and Service)

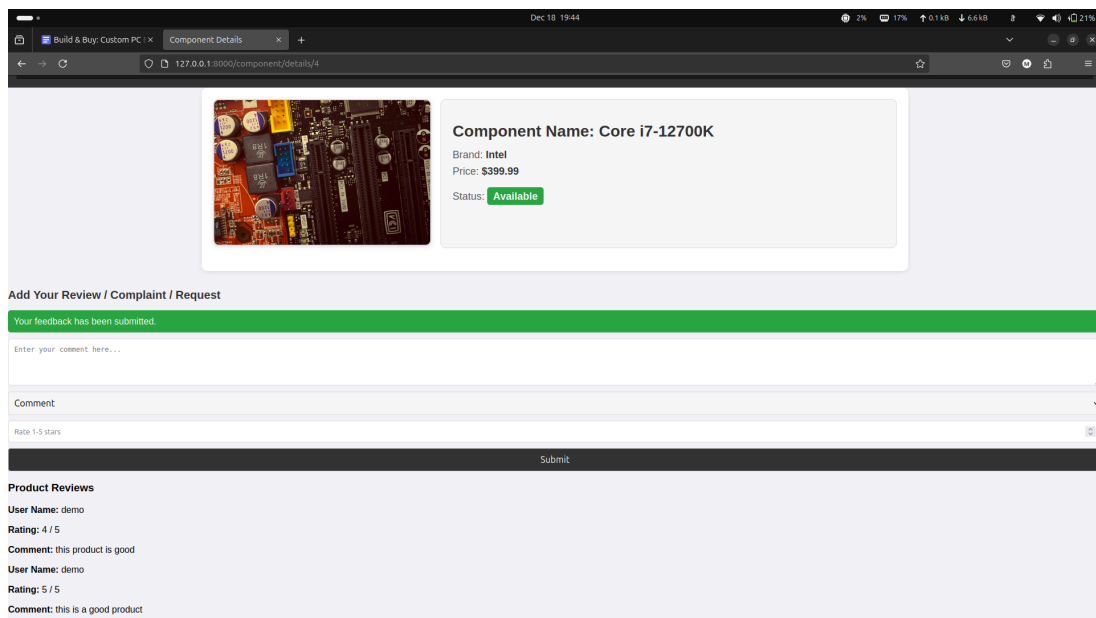

Fig 3.3.1 Customers can review/ complain/ request for product and see others review

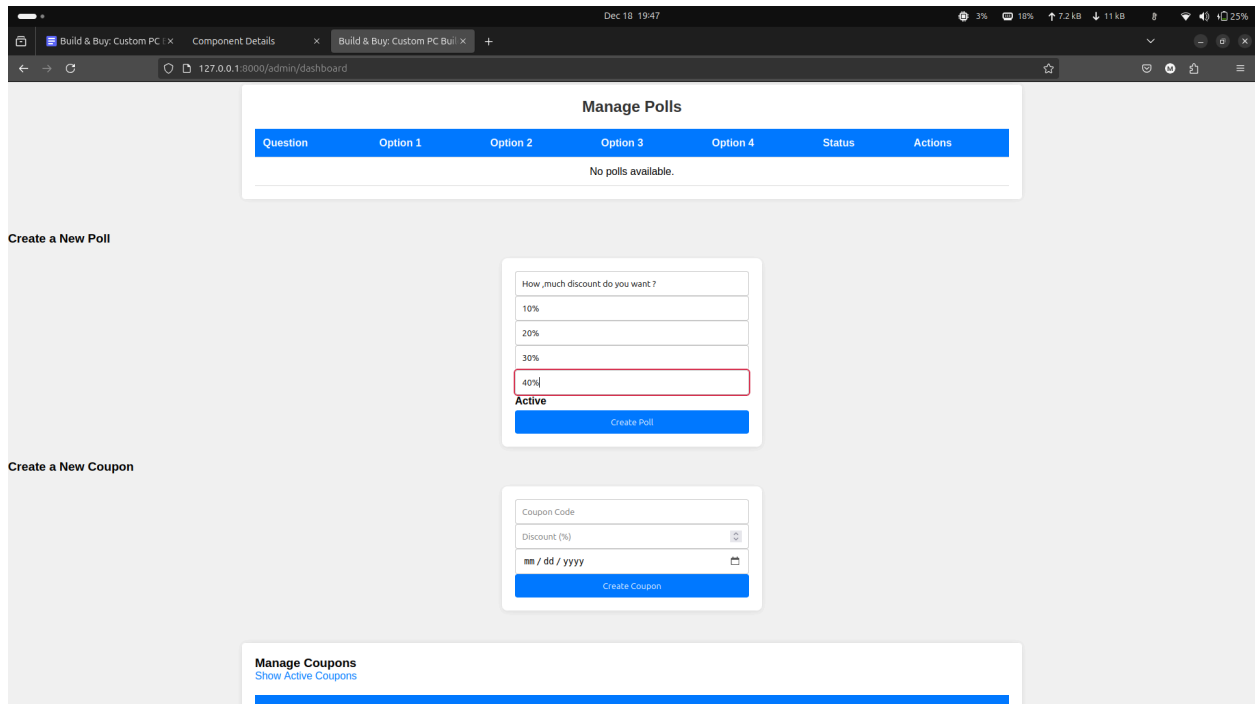

Fig 3.3.2 Admin can create polls

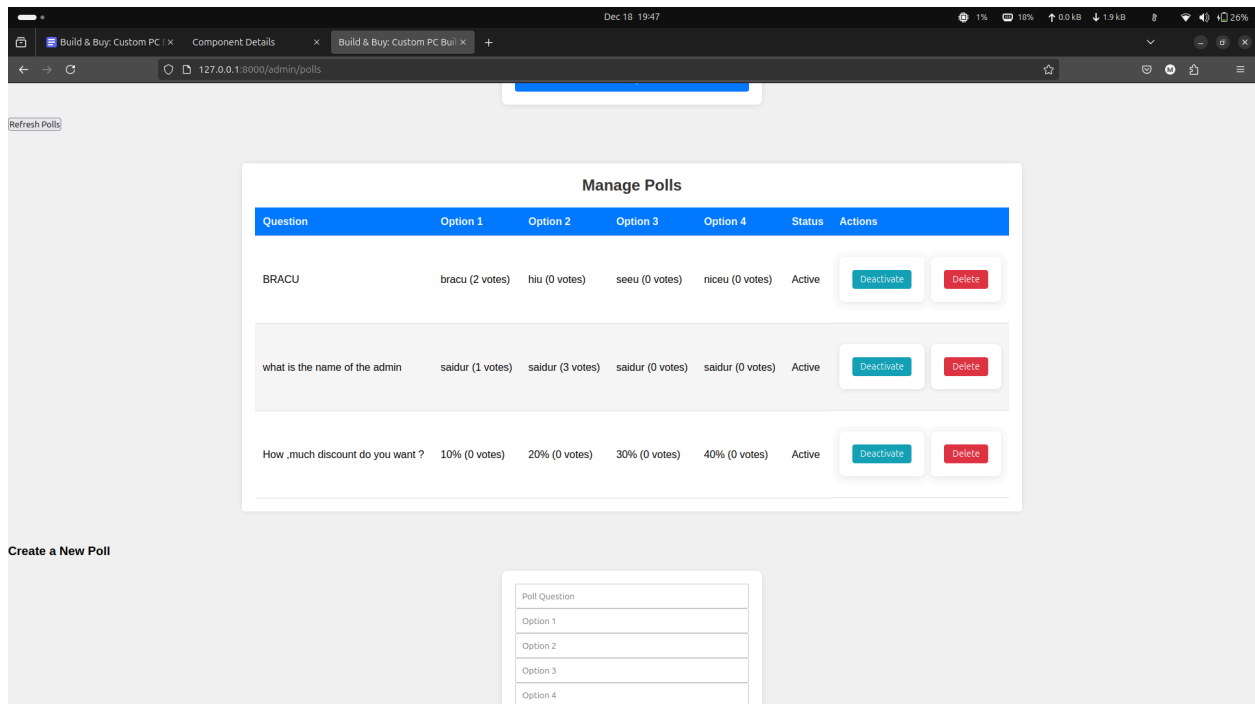

Fig 3.3.3 Admin can manage already created polls

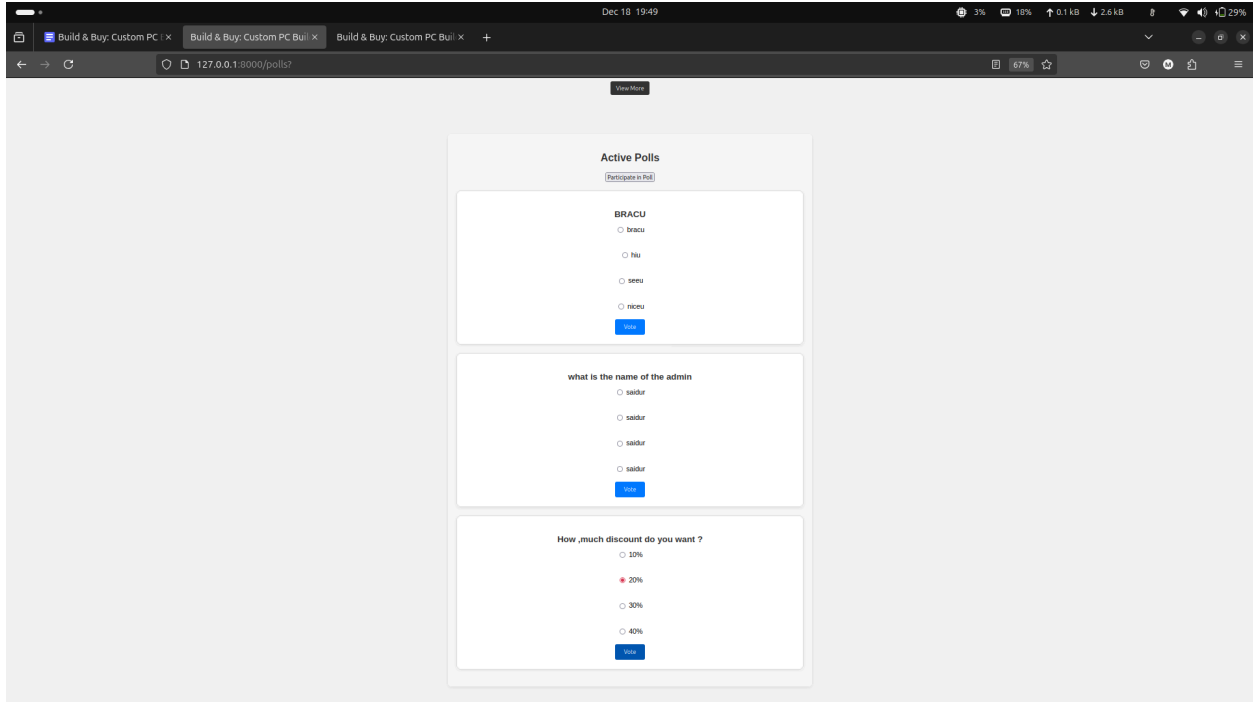

Fig 3.3.4 Logged-in users can participate in polls

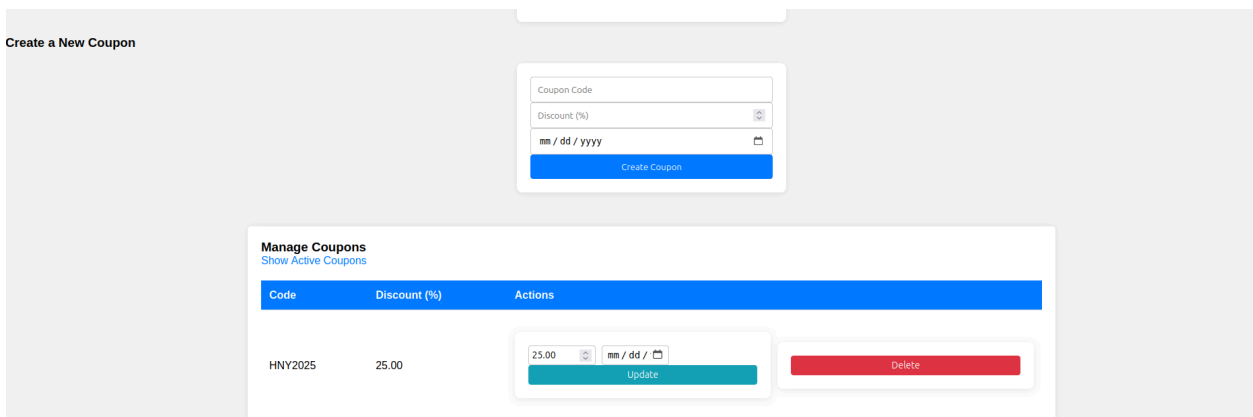

Fig 3.3.5 Admin can generate and manage coupons

This screenshot shows a mobile browser interface for a payment page. The browser's address bar displays the URL `127.0.0.1:8000/payment/8/`. The page title is "Make a Payment - Order #8". The form contains the following elements:

- Original Price:** \$399.99
- Discounted Price:** \$399.99
- Coupon Code:** A text input field containing the code "HNY2025".
- Apply Coupon:** A green button.
- Card Number:** A text input field with the placeholder "Enter your card number".
- PIN:** A text input field with the placeholder "Enter your PIN".
- Make Payment:** A green button.

Fig 3.3.6 Customer before using coupon

This screenshot shows the same mobile payment interface as Figure 3.3.6, but after the coupon has been applied. A "Screenshot" notification bubble is visible in the upper left of the browser window. The form contains the following elements:

- Original Price:** \$399.99
- Discounted Price:** \$300.00
- Coupon Code:** A text input field with the placeholder "Enter coupon code".
- Apply Coupon:** A green button.
- Card Number:** A text input field with the placeholder "Enter your card number".
- PIN:** A text input field with the placeholder "Enter your PIN".
- Make Payment:** A green button.

Fig 3.3.7 Customer after using coupon

3.4 Sprint 5

Implementation of MODULE 5 (Component Comparison and Performance Check)

PC Builder Components					
Name	Type	Brand	Price	Power Consumption	Action
Core i5-12400F	CPU	Intel	\$199.00	50 watt	<button>Add</button>
Ryzen 7 5800X	CPU	AMD	\$329.99	50 watt	<button>Add</button>
Core i7-12700K	CPU	Intel	\$399.99	50 watt	<button>Add</button>
Ryzen 9 5900X	CPU	AMD	\$449.99	50 watt	<button>Add</button>
demo	cpu	demo	\$1,111.00	50 watt	<button>Add</button>
demo88	cpu	dem0	\$222.00	50 watt	<button>Add</button>
